

# AUTOMATIC BREAD LINE POLYPAINS

The DivBloc in «Dual» version is very versatile. Indeed, it can be integrated into an existing automatic group (MERAND or not) to replace your current divider-weigher.

In this case, it will have 2 functions:

**1** *Dough block  
division-weighing*

**2** *Division and feeding of  
the rounder  
or the charger of your  
intermediate proofer*

If the complete bread group needs to be replaced, then the PolyPains bread line with its intermediate proofer equipped with systems to limit the risk of sticking and reduce the resting time of certain doughs, can produce both white bread and Tradition-type baguettes (70-72% hydration, fermentation in tank directly or in a cold room...).
